How To Draw

• Wall Measuring:

 Please measure each <u>wall</u> from corner to corner (DO NOT MEASURE COUNTERTOPS). Measure entire wall, no matter if a door, cabinet/base, window or appliance being used. Use feet and inches per each wall.

Gas/Water Lines:

 Measure the exact distance of water, gas and/or electric line that comes from floor and/or wall (use legend below noting placement also). If in the wall, we need to know the exact distance from wall corner & height from floor.

• Window Measuring:

o Note distance from nearest corner (include dimensions), include height, width & distance from floor.
